          In  this  project,  we  build  an  effective  electrocardiogram  (ECG)
arrhythmia classification method

          using a convolutional

          neural  network  (CNN),  in  which  we  classify  ECG  into  seven
categories, one being normal and the other

          six being different

          types of arrhythmia using deep two-dimensional CNN with grayscale
ECG images. We are creating a web

          application where

          the  user  selects  the  image  which  is  to  be  classified.  The  image  is  fed
into the model that is

          trained and the cited

          class will be displayed on the webpage.
